

# WEIGHWIZ

## Solve your load receiving puzzle with WeighWiz

The Weigh Scale/Station Wizard is a real-time data collection and management system. A choice between attended or unattended modes gives you total control over how you operate your weigh stations.

WeighWiz accurately records the true load weight as a truck passes over a weigh station scale, and associates the load with a specific contractor, truck, destination, or other user-defined entities.

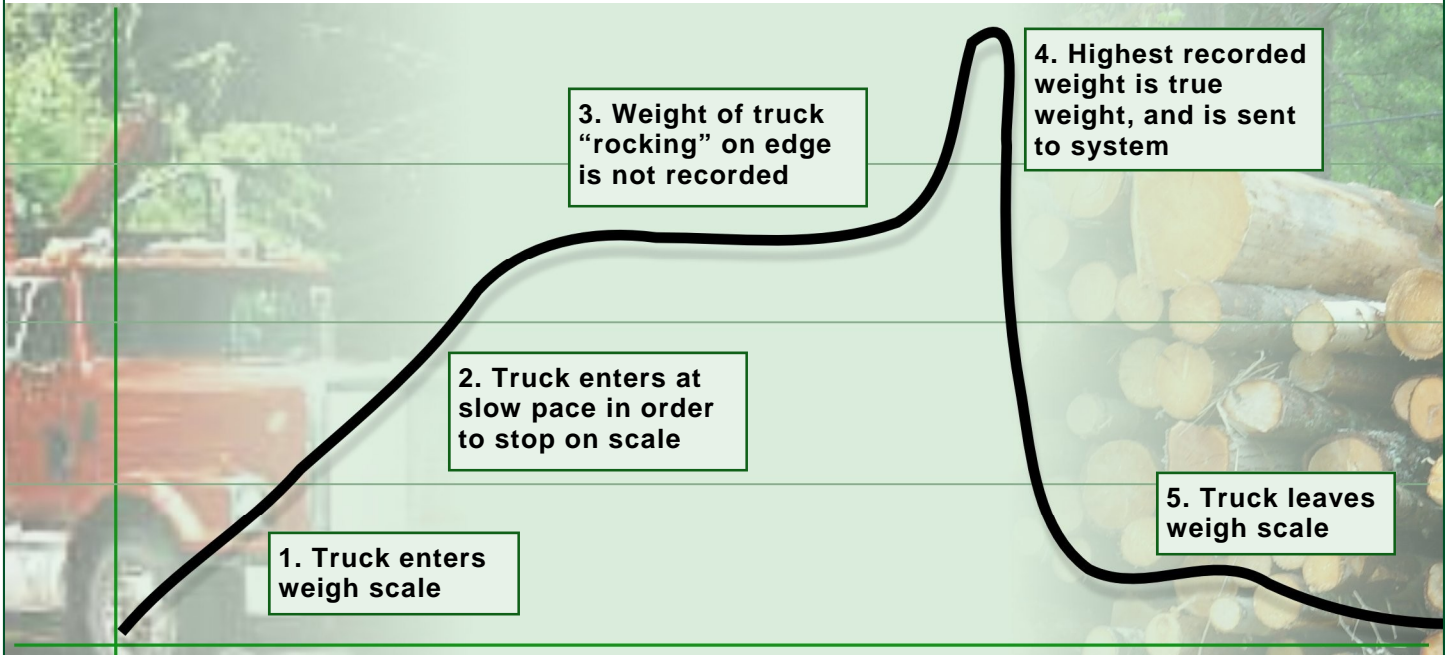

WeighWiz is fully customizable, and its automated features make it especially useful for remote areas, or during off-peak times when a weigh master may not be present. WeighWiz administration settings allow an authorized user to quickly switch from attended weigh-master mode to secure, unattended driver mode. The versatility of WeighWiz software enables you to operate the weigh station to suit your changing needs and operational requirements.

### Features

- Fully customizable
- Full audit controls
- Automatically records up to two scale weights

- Automated and unattended weighing module option
- User-definable auto-tare and weigh-out schedule
- Associates each load with destination, ticket number, in/out date and time, in/out weigh, truck identification and configuration, as well as other user-defined fields
- Associates the load with contractors such as haulers, loggers, fellers, skidders, and more
- Interfaces with information-entry hardware including touch cards, bar codes, and smart cards
- Fully multilingual interface displays messages in French, Spanish or English
- Prints weight certificate at weigh-out, and optionally prints yard pass at weigh-in
- Allows editing of all transaction data *except weight* data after load entry
- User-configurable interface for many scales and scale bureaus
- Multiple, user-defined truck configurations allow for accurate calculation of axle loading
- User-defined unattended, timed master table download and upload to and from remote sites
- Maximum data processing and connectivity options
- Transmits data via modem, LAN, internet, or diskette
- Collects overweight truck data for different seasons

## Benefits

*A return on your investment  
within one year is possible!*

### Accuracy of Weight

WeighWiz understands the process of a truck moving across a scale. It captures data every half-second while a load is on the scale. This process prevents errors caused by drivers "rocking" or "holding back."

### Data Entry

The system operates either with, or without, a weigh master, as determined by the weigh-station administrator.

### Central Networking

The WeighWiz system accommodates multiple data collection sites. The data collection system is configurable at each site. Users can transmit data from multiple sites to a central database automatically, or on demand. WeighWiz can operate as a stand-alone system in conjunction with existing infrastructure, or hand-in-hand with 3LOG's LIMS software.

### Accountability

WeighWiz meets the need for audit controls and reporting. Multi-level password security ensures that only authorized users have access to central weigh station data. WeighWiz closely controls, validates, and monitors driver input while the truck is on the scale.

### Software

WeighWiz uses a Windows-based environment and is compatible with most host systems. The system's outstanding features, along with 3LOG's professional software customization and on-going support services, have improved our clients' efficiency and cost-effectiveness.
