

Corporate Profile

3LOG Systems Inc.

Leading Provider of Wood Product Solutions

Increase efficiencies in your operations

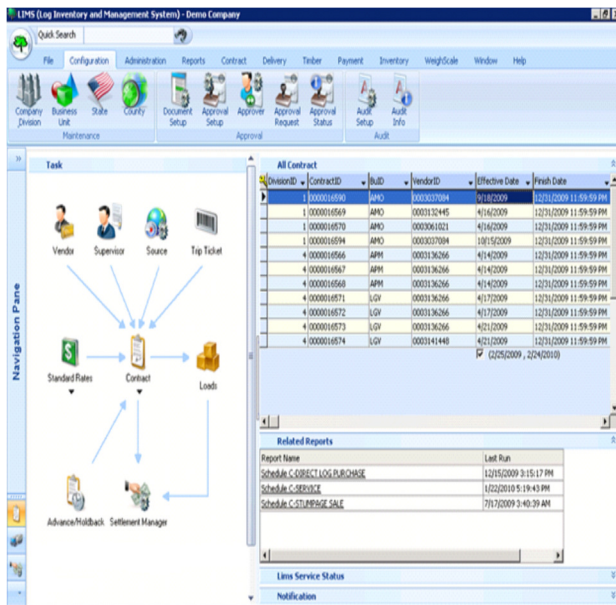

Quality products and continuous enhancements drive the success of our clients

With over 500 implementations across North America and overseas, 3LOG software is the industry standard for companies looking to positively impact their business operations.

Our products are being utilized by TIMO's/REIT's, pulp & paper mills, recycle, OSB/Plywood mills, softwood mills, hardwood mills, biomass/utilities and pellet plants.

3LOG's Log Inventory and Management Software (LIMS) is a multi-function product designed to meet your operating, contractual, administrative, accounting, planning, and reporting needs. From the woods to the mill, we have you covered.

The system is scalable and can accommodate businesses from single locations to complex, multi-divisional operations. Our specialized software was created exclusively for the wood products industry and can be accessed in the office or remotely.

User friendly system interface

System available from a Smartphone

Real-time analysis available to see what's happening in your business at any precise moment. The report generator turns your raw data into valuable information, allowing you to track costs and inventory levels, and plan ahead for maximum efficiency into the future.

LIMS can be interfaced to your financial system, weigh scales, handhelds, RFID, GIS and other external systems/hardware.

"LIMS and WeighWiz are great products . . . user friendly . . . a very flexible system. It's so easy to work with, yet advanced enough to do high-level reports and analysis. Definitely an excellent piece of software!"

Barry Parrish, Fiber Procurement and Sustainability Manager

Consulting

- Strategic planning and IT architecture
- Network consulting
- Business process reviews
- Feasibility studies
- Cost-benefit analysis
- System design
- Systems integration
- Implementation planning
- Project management

Training

- LIMS software application
- WeighWiz software application
- Mobile application
- Report Wizard
- Data management and preparation
- Remote data collection and maintenance
- Quality control and assurance
- Operation of hardware platforms

Research and Development

Our commitment to innovative leadership through ongoing research and development includes:

- Continual monitoring of forest industry trends and business processes
- Staying current with innovations in software and database technology
- Maintaining close contact with users and being responsive to clients' evolving needs

Installation and Set Up

- Technology configuration
- Software installation
- Network assistance

"It's been excellent! We migrated to LIMS from a legacy system. Now we are getting delivery information and payment processing data with details on each phase. LIMS handles data from our mill divisions to the central database in our head office accurately. Such efficiency strengthens our company's inventory management and business cycle."

3LOG's professionals have in-depth knowledge and experience both in the forest industry and in information technology. They are committed to quality and customer service. We sometimes marvel at how responsive they are."
